

Introducing Calculation Engine for ExcelWriter & PowerPointWriter

Add PowerPoint to your .NET applications with OfficeWriter's newest component. Focus design efforts in PowerPoint to create templates and then import data with as little as 5 lines of code. See our quick overview below.

PowerPointWriter

PowerPointWriter provides a new way to populate PowerPoint presentations with data. The template-based approach makes it easy to generate presentations on the fly. PowerPointWriter supports images, basic formulas, and automatic repeat behavior to import multiple rows of data.

- **Import multiple rows of data** - Import hundreds of rows of data and know that all of your data will fit onto your slides. If you need extra space, PowerPointWriter will expand the presentation to fit your data.
- **Users design reports in PowerPoint** - Have the freedom to change template layouts, formatting, and more without changing your code. Users create templates directly in PowerPoint.
- **Template-based approach** - Have the freedom to change template layouts, formatting, and more without changing your code. Users create templates directly in PowerPoint.
- **Single data import** - Handle Enterprise level data securely, and be confident the slide deck always has the latest data. PowerPointWriter supports multiple data sets and large sets of rows.
- **Integrate with any .NET application** - Deliver your presentations at scale. PowerPointWriter reports works with most PowerPoint viewers.

Calculation Engine

Now you can evaluate formulas in Excel workbooks using ExcelWriter. Also check out our website for the formulas currently supported.

D3 X ✓ fx =COUNTIF(C7:C21,"Hon")

POSTMEDIA NETWORK

“I upgraded to latest version, with little effort. After that, users who were waiting around 30 minutes to obtain their Excel sheets, started getting results after... say...4 minutes (it is a heavy spreadsheet).

By now the new version has been promoted to Production and everyone is happy.”

Marcelo | Postmedia.com

LPL Financial

“As a major financial institution, it’s a must for our business units to render extremely complex spreadsheets that preserve every advanced Excel feature. OfficeWriter is going to save us thousands of dollars next year alone by eliminating the old way of rendering workbooks which took 10 times longer to code. We absolutely love the product and recognize the value of working with a highly reputable company like SoftArtisans.”

Scott Tate, PMP | LPL Financial Services

“The folks at SoftArtisans were very helpful in providing me the support I needed to work around the issue, even providing me up-to-the-minute builds of the product. Anyone purchasing the product should expect the same level of support I received.”

Kevin Griffin | Software Developer

EMC²

“SoftArtisans provides easy-to-understand sample code, videos and pre-built SharePoint solutions that make getting started trivial.”

Paul Forsthoef | EMC Global Services

“SoftArtisans' OfficeWriter takes Microsoft's Excel and Word and transforms them from mere spreadsheet and word processing documents to full-fledged data presentation and Business Intelligence delivery platforms.”

Andrew Brust | Blue Badge

“OfficeWriter is a great piece of software and suits our needs well. I also loved the new features available in the new version and I will look forward to use them in our Reporting Projects soon.”

S. | Major Consumer Bank

“Working with SoftArtisans consulting services was a very positive experience. They met every commitment and were very responsive to any issues experienced during the project.”

Jeffrey Earl | Development Manager
